

THYROFLEX™

For The Diagnosis and Management of Thyroid Disorders

The patented Thyroflex™ is a non-invasive state of the art system to test and manage thyroid conditions. It uses reflexes and symptoms to accurately determine THYROID function.

The **Thyroflex™** test determines whether the patient is hypothyroid, hyperthyroid, or euthyroid.

Research by the leading thyroid experts, Dr. Broda-Barnes and Dr. Thierry Hertoghe, indicates that 80% of the population has a thyroid disorder. Unfortunately, a large percentage are unaware that they have a thyroid disorder. For this reason, thyroid function screening is vital for everyone as a preliminary health assessment.

The conventional screening by standard blood test is not an effective tool to establish thyroid function, because it is invasive and inaccurate.

The **Thyroflex™** is the #1 test to diagnose and manage thyroid conditions, because it is accurate, non-invasive, requires no needles and is cost-effective!

Advanced Thyroid Test

- The **Thyroflex™** tests the reflex point on the arm (non-invasively) while the patient is seated.
- Results are available immediately to determine the state of the thyroid. The Thyroflex™ identifies the risk and treatment within a 4-minute test.
- The **Thyroflex™** is owned by Nitek. No machine purchase required. Total cost limited to one-time processing fee + monthly licensing fee + flat rate fee per test.

According to the late Sir Dr. R. I. S. Bayliss - a former famous Endocrinologist in London, Chairman Of The Endocrinology Society, and Endocrinologist to the British Royal Family -

*"All thyroid blood tests are not accurate in determining the thyroid function. The only way to determine thyroid disease is from **reflexes** and **symptoms**."*

+ WHY THYROFLEX™?

01

STANDARD BLOOD TESTS ARE INSUFFICIENT

The thyroid hormones (TSH, T3, T4, FT3 & FT4) found in the blood, have limited value in diagnosing thyroid conditions.

02

98.5% ACCURATE

The Thyroflex™ test is an accurate 4-minute test, which is non-invasive, pain-free, and cost-effective. The Thyroflex™ tests the end artifact of the patients' intracellular thyroid function. It measures brain function, reflex speed, and resting metabolic rate (RMR).

03

ONE-STOP SOLUTION

Diagnosis and management of thyroid and autoimmune disorders, with access to additional testing (including RT3 and DNA/RNA tests) and hormone medication, via Nitek Medical.

04

GLOBAL SUCCESS

In February 2022, we passed the 2 million patient mark, courtesy of patients and practitioners from across the globe. The Thyroflex™ is used and endorsed by the top specialty medical centers around the world, and has been featured in numerous international publications and TV shows.

THE PRICING PLAN

THYROFLEX™ TESTING SOLUTION

- **NO machine purchase required.**
- We supply the complete system, training, maintenance, updates, upgrades and replacements.
- Contact us for our pricing plan at sales@nitekmedical.com

Other Services

THYROFLEX™

Reflex Resting Metabolic Rate testing device.

THYROIDINE™

Iodine, urine and saliva testing device.

DR T'S CORE HORMONES

For balancing the hormones and supporting the thyroid.

BIO HORMONES

Male and female natural bioidentical hormones.

BIOPHARMA

Comprehensive range of nutraceuticals and pharmaceuticals.

DNA/RNA

Genetic testing and augmentation analysis service.

TELE MEDICINE

Remote prescription consults and fulfillment worldwide.

BIOBLOOD

Worldwide blood, urine and saliva testing service.
